

# CSS Tutorial

Hello friends, Today I'll give you intro to CSS.

## What is CSS?

CSS is called cascaded style sheet. Which is used for designing web pages.

Before you learn about CSS you have to little bit idea about HTML.

HTML is used to make the web pages. You can learn more about HTML by going to [developersnation.co.in](https://www.developersnation.co.in) where you find tutorial about HTML.

Its best place to start your web development journey.

So, I'm not going to tell you about everything about CSS but I'll give you the best reference which is the best way to learn and develop web pages. Which is most developers do.

Let's see how we use CSS in our web page.

So, basically there are 4 different way we can use CSS in our HTML code.

1 Inline Style.

2 Internal Style.

3 External Style sheet.

4 Import Command.

I'm going to teach you external stylesheet. Which is best for us. And every developer use that.

First let's see Structure of CSS.

```
Selector {  
    Property: value;  
}
```

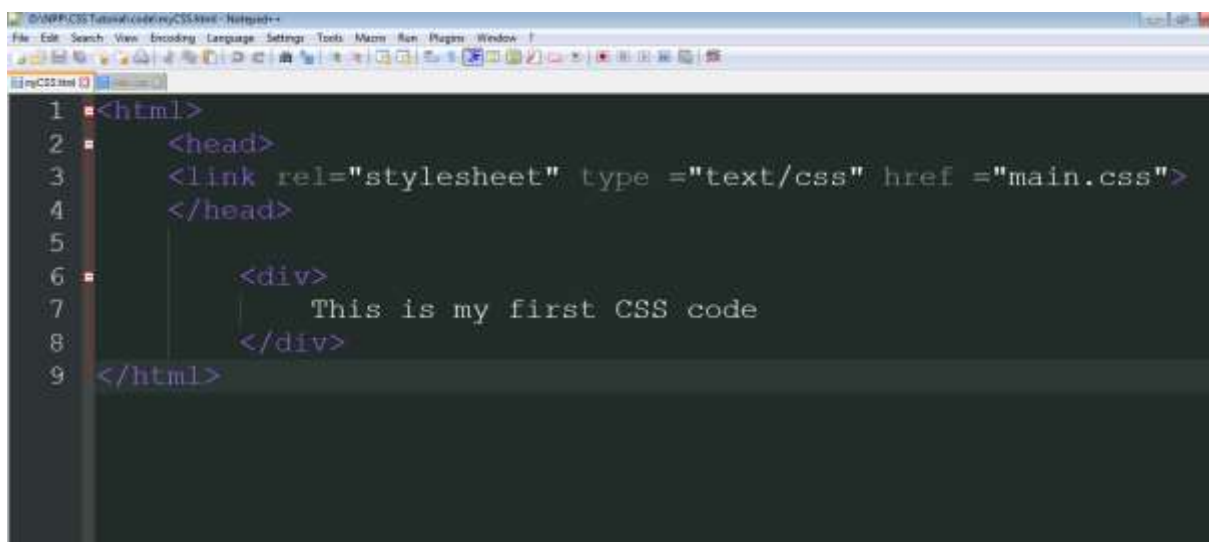

Let's see the example below

```
div{  
    color: red;  
    margin: 20;  
}
```

In this case the div is selector. Which is written first and color is property. Yes you guess that red is the value;

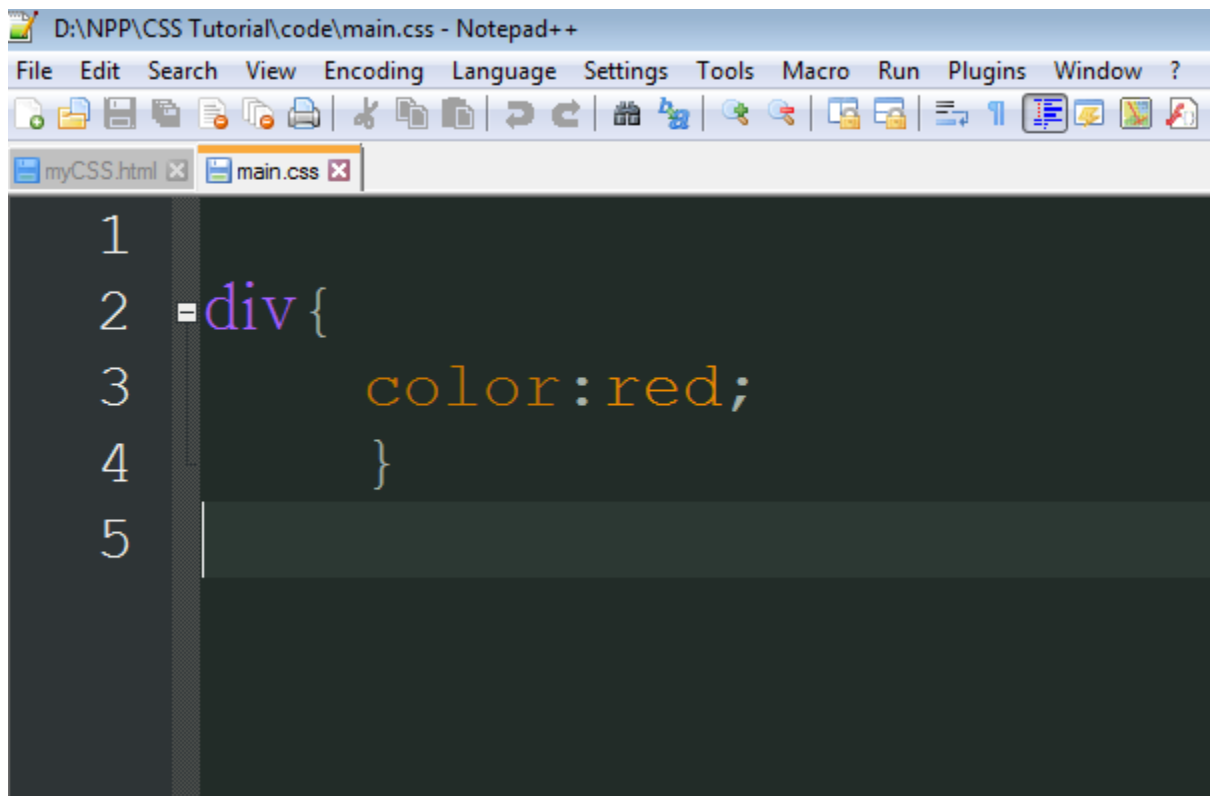

So, we use link tag to include our CSS in the HTML. We use head tag to use our CSS document. It's good practice to keep the CSS stylesheet as a standalone document.

This is HTML document. Don't forget to save this document as .html format.

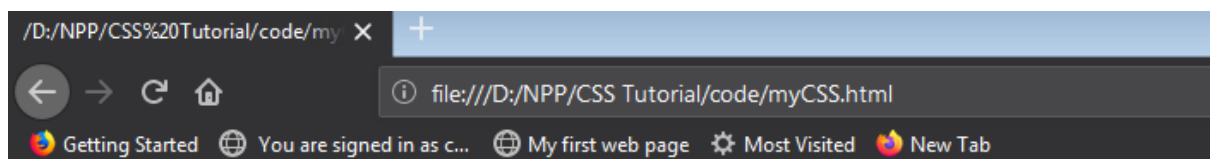

```
1 <html>
2   <head>
3     <link rel="stylesheet" type="text/css" href="main.css">
4   </head>
5
6   <div>
7     This is my first CSS code
8   </div>
9 </html>
```

This is CSS document you have to save this document as .css

A screenshot of the Notepad++ text editor. The title bar shows the file path 'D:\NPP\CSS Tutorial\code\main.css - Notepad++'. The menu bar includes File, Edit, Search, View, Encoding, Language, Settings, Tools, Macro, Run, Plugins, Window, and ?. The toolbar contains various icons for file operations. The tab bar shows two tabs: 'myCSS.html' and 'main.css'. The main editing area has a dark background with light-colored text. Line numbers 1 through 5 are visible on the left. The code is a CSS rule for a 'div' element, setting its color to red. The code is: 

```
1  
2 =div {  
3     color:red;  
4 }  
5
```

Output:

This is my first CSS code

Please share this post with your friend's  
thank you.

Tip: Please do not forget to save the document if you don't save the document it's not going to work. And make sure you use right formats, like .html for html documents and .css for CSS documents.

Question:

HTML use for?

- a. Make videos
- b. Make games
- c. **Make web pages**
- d. Make programs
